

Seek by iNaturalist

What is the Seek app?

A kid safe, family friendly app that uses image recognition technology to help you identify plants & animals in your neighborhood, on a hike, or at grandma's house!

Watch a short video here:

[Seek App](#)

How does it work?

Use your iPhone, iPad, or iPod Touch camera with the Seek app to help you identify different types of wildlife and organisms. Once Seek has identified the organism, it will tell you both the common and scientific name. You can also read more information about the organism, view a range map for that particular organism, learn about its taxonomy, and see how many other observations have been made of the same organism nearby and around the world!

The more organisms you identify using Seek, the more recognition you receive! You can earn Species Badges and level up by observing more organisms! There are even monthly challenges you can participate in and earn additional, special Challenge Badges by completing those observations.

Challenges:

1. With your parents' permission, download the Seek app. Go for a walk in your neighborhood and use the app to help you identify different plant & animal organisms. See if you can earn your first Species Badge.
2. The April 2020 Seek Challenge is the Citizen Science Challenge. Participate in this challenge by seeing if you can use Seek to help you observe 10 species you haven't already observed. So, get outside and "seek" out some new plants & animals!!
