

BUILD A MASON BEE HOME

1. Cut a 6"x 12" piece of sturdy corrugated cardboard, with the corrugation running along the 6" side. Take a sharp pair of scissors and score along the corrugation every 2" along until you have 6 sections. Bend the corrugated seams so that the entire piece of cardboard can be folded into a hexagonal tube.

2. Stuff the box with small cardboard tubes like these or rolled brown paper.
3. Add a pointed roof to keep water from collecting on the top. Add packing tape to the top to make it more water resistant. Tape into place.
4. Place your bug home in your backyard, somewhere out of the rain like in the eaves of a covered patio. *(The images below are for fun. You should place yours in a protected yet accessible area)*
